

LANYARD SPECIFICATIONS FOR ISC 2025

1. LANYARD

- optimal length 90 cm/ 35-36 inches (without a fastener at the neck, as this is uncomfortable to wear)
- the lanyards **must have 2 hooks** or clicks to prevent the badge from flipping over and keeping their optimal appearance
- the lanyards should be packed in batches of 100

2. HOOK (must have two)

Preferred 2 hooks are:

- **metal crocodile/bulldog clip**

but

- crane hook, spring or lobster clip will also work.

Not usable are:

- metal or plastic swivel hooks
- plastic clips
- key rings

Information:

Our attendees may choose their preferred lanyard. The design, ideal length and appropriate hook are important factors. We recommend using sustainable materials in lanyard production to ensure eco-friendliness without sacrificing quality or functionality.

3. BADGES

For sustainability reasons we have eliminated badge holders and use badge material that itself is a synthetic **tear-resistant** material that does not need a plastic sleeve. Once printed, each 4"x12" badge will fold in half at the central perforation to become 4"x6" in size. Each end of the lanyard can attach with any of our recommended clips to the two outer oval perforations at the top of the badge.
