

ISC 2027 LANYARD SPECIFICATIONS REQUIRED

General Requirements

- **Total Quantity:** 1,500 lanyards.
- **Packaging:** Must be delivered in batches of 100.
- **Dimensions:** 90 cm in length (continuous loop; no fasteners or breakaway clips at the neck).
- **Design:** Lanyards do not need to be ISC-branded. Neutral designs are welcome and encouraged to promote future reuse.

Hardware Specifications (Clips & Hooks)

To prevent the badge from flipping and to ensure optimal readability, every lanyard **must feature exactly two attachments**.

- **Preferred:** Metal crocodile/bulldog clips.
- **Accepted Alternatives:** Crane hooks, spring clips, or lobster clips.
- **Not Permitted:** Swivel hooks (metal or plastic), plastic clips, and key rings.

Material & Sustainability

- **Lanyards:** As attendees choose their own lanyards, design, comfort, and functionality are key. We strongly encourage the use of sustainable, eco-friendly materials.
- **Badges (For Context):** To eliminate plastic waste, we no longer use plastic badge sleeves. Our badges are made from a 4"x12" tear-resistant synthetic material, which is folded in half to 4"x6". The two lanyard clips will attach directly to two oval perforations at the top corners of the folded badge.
